

## Economical and Beautiful Engineered Concrete Polished floor

**Traditionally, concrete floors have been hidden under other flooring material, such as different coatings or tiles. Why stack layer upon layer, wasting time and money, when you can create a beautiful, durable, glossy polished concrete floor?**

Polished concrete is enjoying unprecedented popularity on a global scale. It's not hard to see why: concrete offers superior durability and performance. It requires less maintenance than coatings, natural stone, terrazzo tiles and many other materials. Concrete floor is the perfect choice for industrial warehouses, logistic centers, big-box retailers, commercial properties, offices, and more.

## What are the benefits of choosing polished concrete?

### Save costs

- Economical – Using your existing slab as the finished floor surface is more cost-effective than installing different floor materials over it
- Keep Maintenance Costs Down – No waxing required. Grinding and polishing down the road is simple
- Endurance – Long service life and increased resistance to foot traffic and machinery

### Good for your health (and the planet)

- Polished concrete allows the floor to breathe, eliminating common issues caused by other flooring materials that seal and suffocate the surface
- Polished concrete does not require hazardous coatings, cleaners, or adhesives
- Highly-polished floors save energy by reducing the need for artificial lighting
- Very good fire resistance compared to many other materials
- Concrete is a sustainable option if you use an existing concrete slab, avoiding the consumption of new materials

### Beautiful look and excellent performance

- Polished concrete looks a bit like marble or granite, but is much more economical
- Highly polished surfaces offer a clean, professional image – this is especially important for public facilities
- Concrete floors do not have as many joints, creating a surface that is easier to clean and has fewer weak points
- Very high abrasion resistance

### 100% dust-free and easy to clean

After Ecoscape polishing, the floor is 100 % dust-free, as dirt and grime can no longer collect on the surface. Polishing reduces the need to clean concrete floors and makes maintenance easier and faster.

### Application Areas

- Parking Areas
- Basement (As a replacement to VDF Floor)
- Usable Public Floor (As a replacement to Marble, Tiles, Granite, etc.)
- Usable Residential Floors, Common Areas
- Any other place as desired by architects.

### Can be applied over:

- Polishing on existing concrete surface
- Polishing on minimum overlay of 50mm of fresh concrete
